# MANUAL

1. git clone project from repo
2. cd to repo
3. make build
4. open the build directory
5. open MLP_s21 app
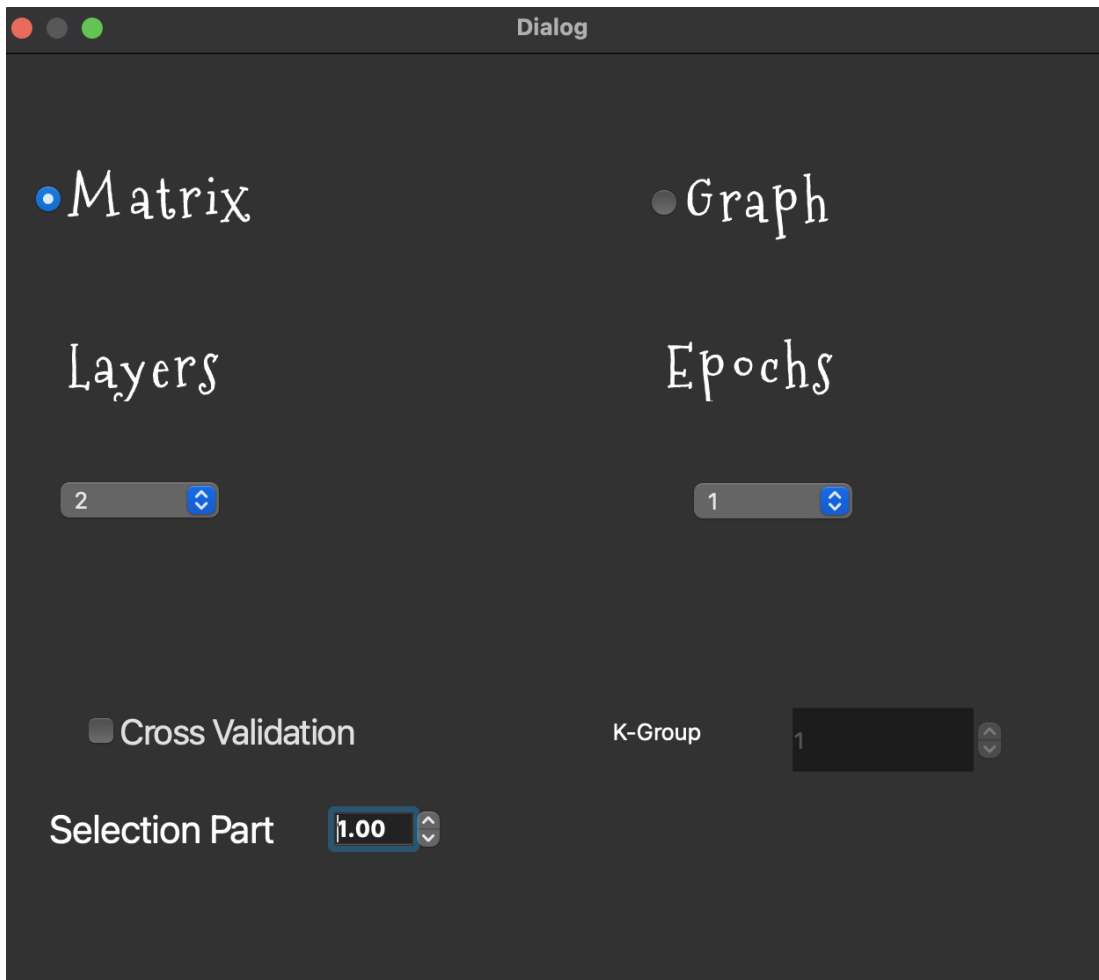

and then you will see the start page of application → click "Start"

it's main window of MLP app

open the settings window in order to configure
the program for neural network training

here you can choose a matrix or graph training model,
and the number of epochs and hidden layers

then go back to the previous window and click on
the "Start learning" button or you can select already
trained weights to test the program using
the "Upload weights" button
